Jewel Flow Chat v9: feature walkthrough

Every screen, gesture and rule in the chat, for design, product and engineering. Prototype: **Chat v9.dc.html**. All screens below are captured from it.

SIGNED IN AS	OTHER STORE	PEOPLE AND GROUP
Suresh Owner of Krishna Jewellers, with Priya, Karthik and Anil	**Laxmi Chains** Arun, Deepa, Meena, Ravi, Kavya, Mohan	**Ananya Rao · Bridal season pool** A customer, and a group of three stores

1. What changed since v7

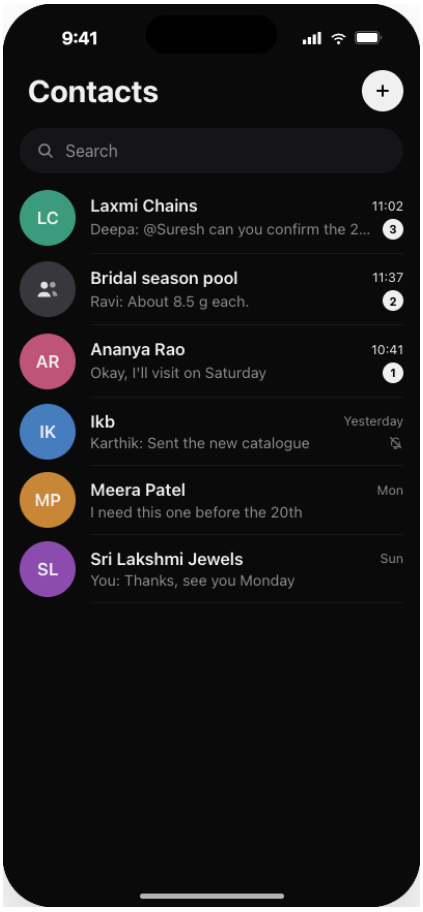

- **A store chat opens on your last discussion,** not on a list. The other discussions sit in a bar under the header, like Telegram topics.
- **Switching is one tap** on a chip in the bar. **›** opens the full list from v7. **+** starts a new discussion straight away, with no form.
- **Long-press a message** to reply, reply to your team, copy or star. Replies quote the original message.
- **A lighter message bar:** attach, the text box with the team lock inside it, and a mic that turns into send when you type.
- **Profiles share one short layout** for stores, personal contacts, staff, customers and groups. Only the actions and rows change.
- **Shared in chat** puts catalogue products first, then photos, then files. Every item links back to its discussion.
- **Less on screen:** smaller + and › icons, no subtitle under the store name except "typing…", and no extra buttons on product cards.

2. Key terms

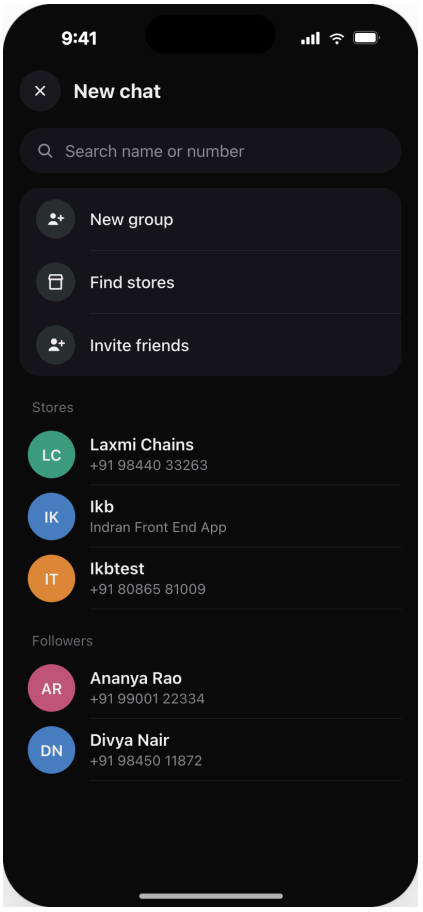

Term	Meaning
Chat	One row in Contacts: a store, a person or a group.
Discussion	A conversation inside a chat. It is about a product (shown with its photo) or has no product (shown with a notes icon and named by date). It is open or closed.
Discussion bar	The row of chips under the chat header. One chip per open discussion. The white chip is the one you are in.
Last discussion	The discussion you had open when you last left this chat. Opening the chat again lands there.
Team-only note	A message seen only by the writer's own store.
Profile	The page you get by tapping a name. It looks the same for every kind of chat.
Shared	Everything sent in a chat across all its discussions: products, photos and files.

3. Contacts

Contacts lists chats, newest first, with search and filters. **+** opens New chat: New group, Find stores, Invite friends, then stores and followers. Tapping a store row opens that store's last discussion (section 4). Tapping a person opens a normal one-to-one chat.

Contacts. Unread counts, the @ badge and the slashed bell for muted chats.

New chat (from +). Unchanged from v7. Tapping a contact opens the chat straight away.

4. Store chat

4.1 Opens on the last discussion

Tapping Laxmi Chains in Contacts opens the discussion you were last in, as a normal full-screen chat. There is no list in between. From top to bottom:

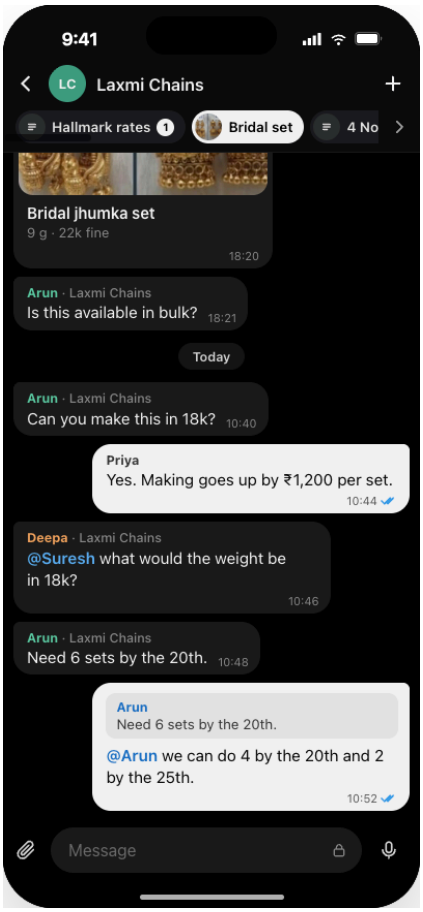

- **Header:** back, the store's photo and name, and **+**. Tap the photo or name to open the store profile (6.2). A line under the name appears only while someone is typing. A slashed bell next to the name means the chat is muted.
- **Discussion bar:** one chip per open discussion, with a product photo or notes icon, its name and an unread count. It scrolls sideways. **›** at the end opens all discussions (4.4).
- **Messages** for the current discussion only (section 5).
- **Message bar:** attach, the text box with the team lock inside it, and the mic. The mic turns into a send button when you type.

4.2 Switching discussions

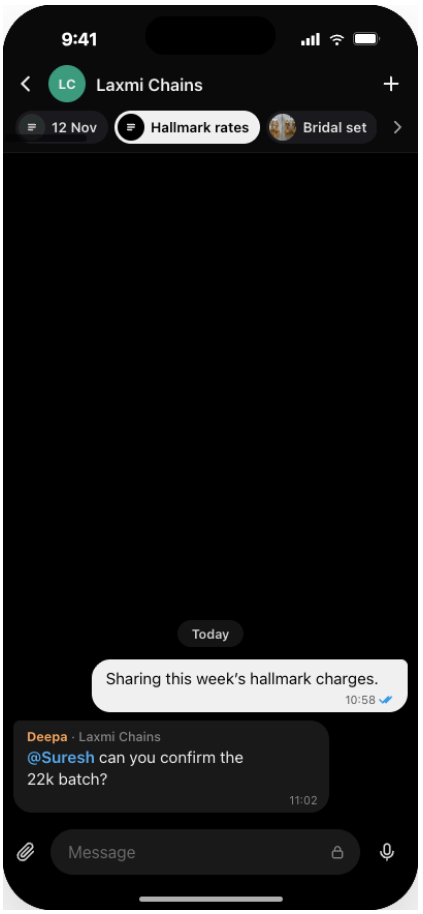

Tap a chip to switch. The chip turns white, its unread count clears, and the bar scrolls to keep it in view. Chips follow the order of the full list, so dragging a discussion in the list moves its chip too. Closed discussions are not in the bar.

4.3 New discussion

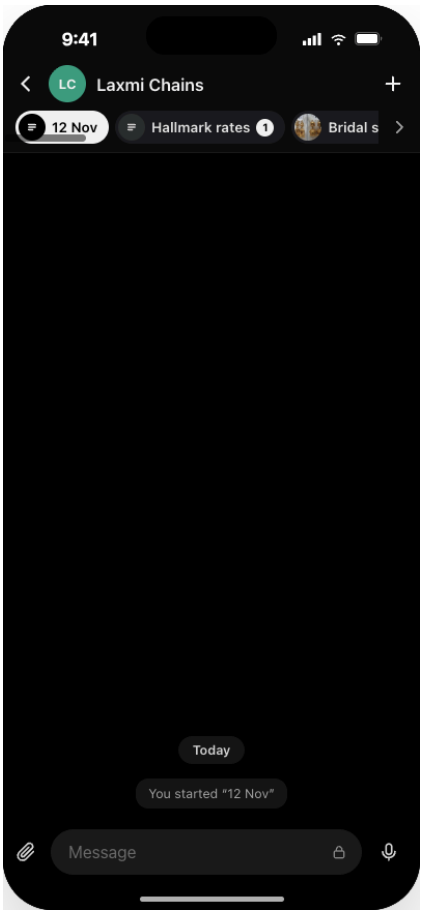

+ starts a discussion straight away. There is nothing to fill in. It is named with today's date, opens immediately, goes first in the bar and starts with a status line. A second one on the same day adds the time to the name. To ask about a product, attach it from the catalogue inside the discussion.

Store chat. Opens on Bridal set, the last discussion. Hallmark rates has 1 unread.

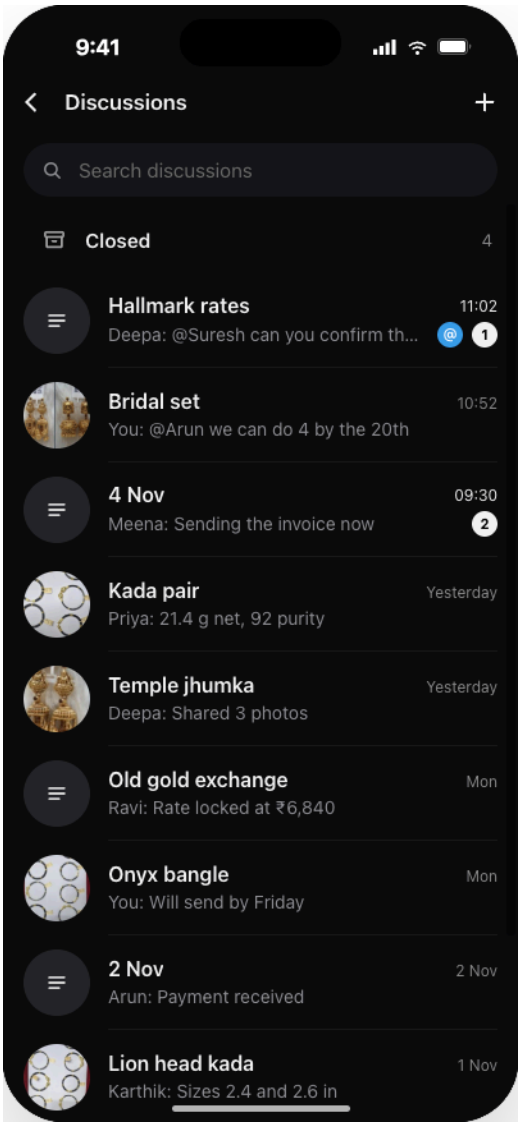

Switched. Tapping Hallmark rates shows its messages and clears its count.

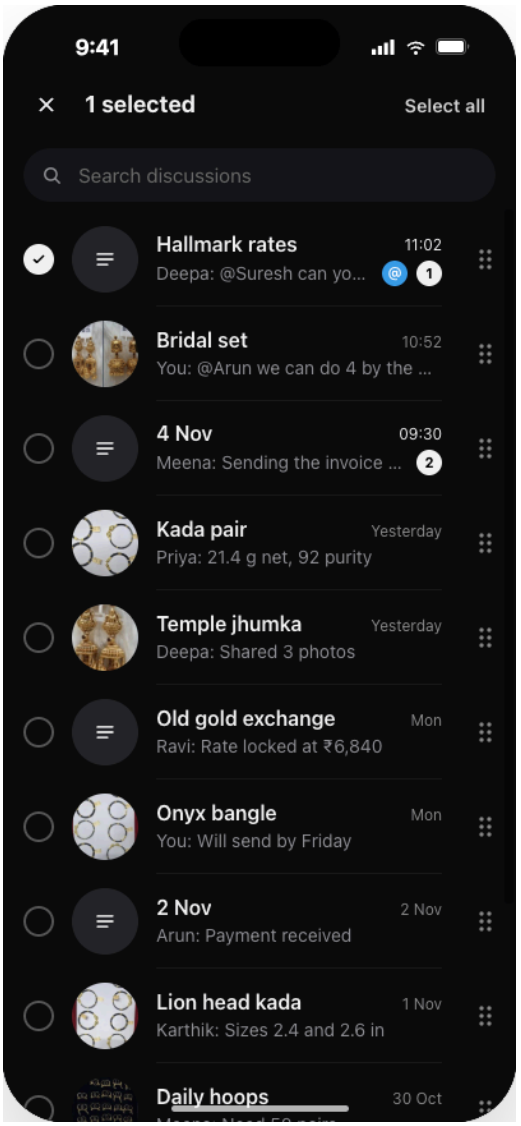

After +. "12 Nov" is created, opened and placed first in the bar.

4.4 All discussions

› opens the list from v7, with nothing removed. Tap a row to open that discussion. Search matches names and last messages, including closed discussions. Closed discussions are kept in one row at the top. Long-press to select. Selection mode adds Mark read, Close, Select all and drag ⠿ to reorder. **+** works here too.

All discussions. Search, the Closed row, then open discussions.

Long-press. Select several, then mark them read or close them. Drag ⠿ to reorder.

5. Messages

5.1 What a discussion shows

- **Product card** at the start of a product discussion: photo, name, weight and purity.
- **Photos** as large rounded images.
- **Names** on the first message of each run, with the sender's store in grey. Your own store's messages are white and show the writer's name when it isn't you.
- **@mentions** in blue, **read ticks** in blue, and **day markers** such as Today.

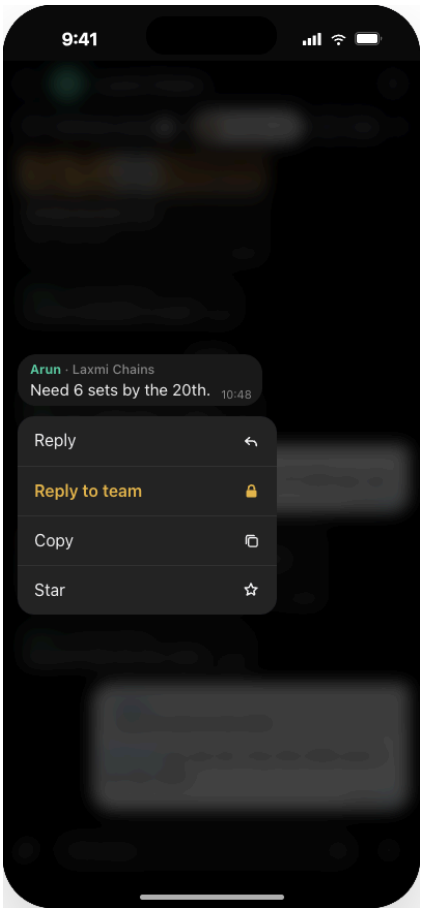

5.2 Long-press a message

Long-press (or right-click on desktop) a message to blur the chat and show that message with four actions: **Reply**, **Reply to team** (amber, with the lock), **Copy** and **Star**. Tap outside to cancel.

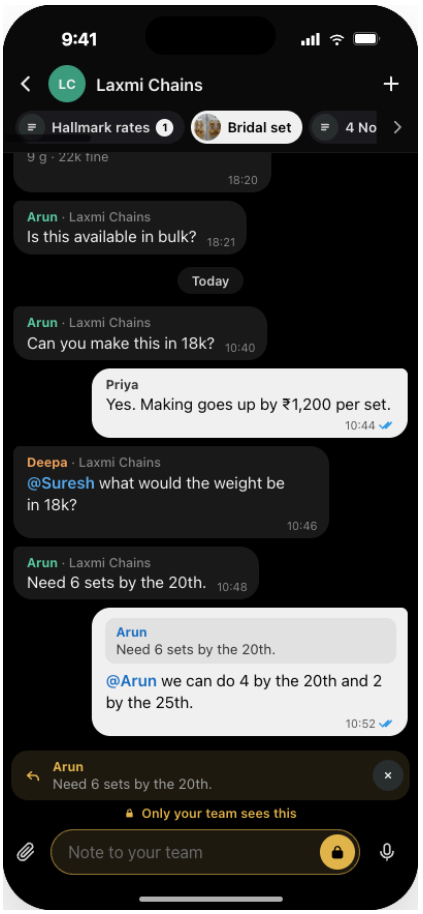

5.3 Replying and team notes

Reply puts a preview of the quoted message above the message bar, and you can cancel it with ×. Reply to team does the same and also turns on the lock: the preview, text box and lock turn amber, and a line says *Only your team sees this*. Tap the lock any time to switch between normal messages and team notes. A sent reply shows the quoted message inside the bubble.

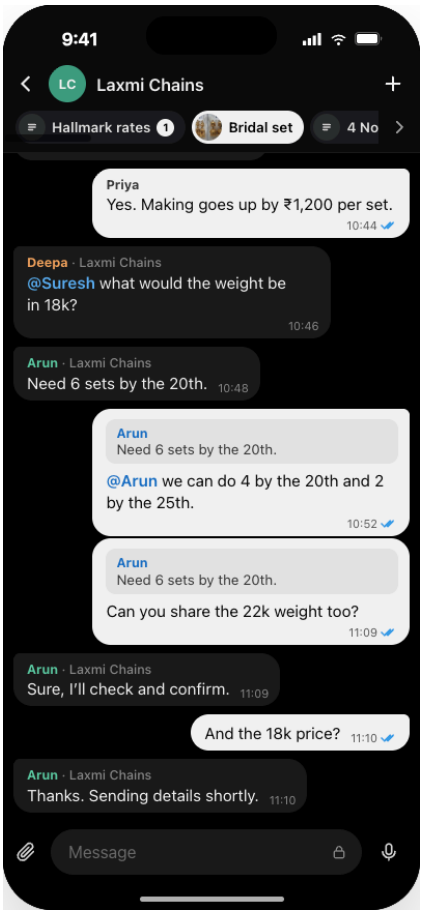

When you send, the other store shows "*Arun is typing…*" under the store name and in a bubble, then replies. The prototype fakes this reply; in the product it would come from a real person.

Long-press menu. Reply, Reply to team, Copy, Star.

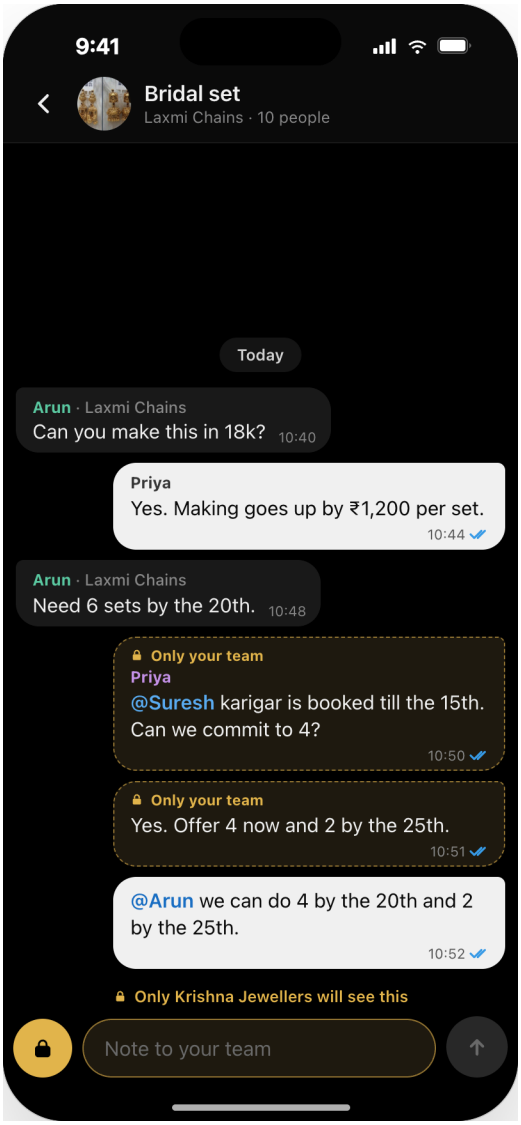

Reply to team. Amber preview and box. Only your store will see it.

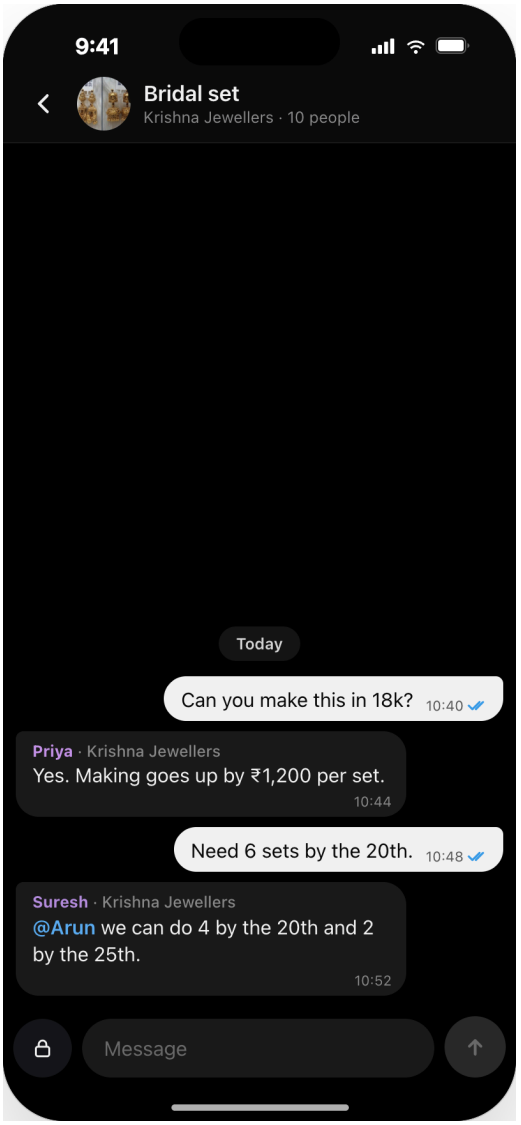

Sent. Quoted replies, blue ticks and Arun's answer.

Team notes work as in v7. Krishna Jewellers sees its notes with a dashed amber outline. Laxmi Chains sees the same discussion with the notes left out, and nothing suggests they exist.

Krishna Jewellers sees its own team notes.

Laxmi Chains sees the same discussion without them.

6. Profiles

6.1 One layout for every profile

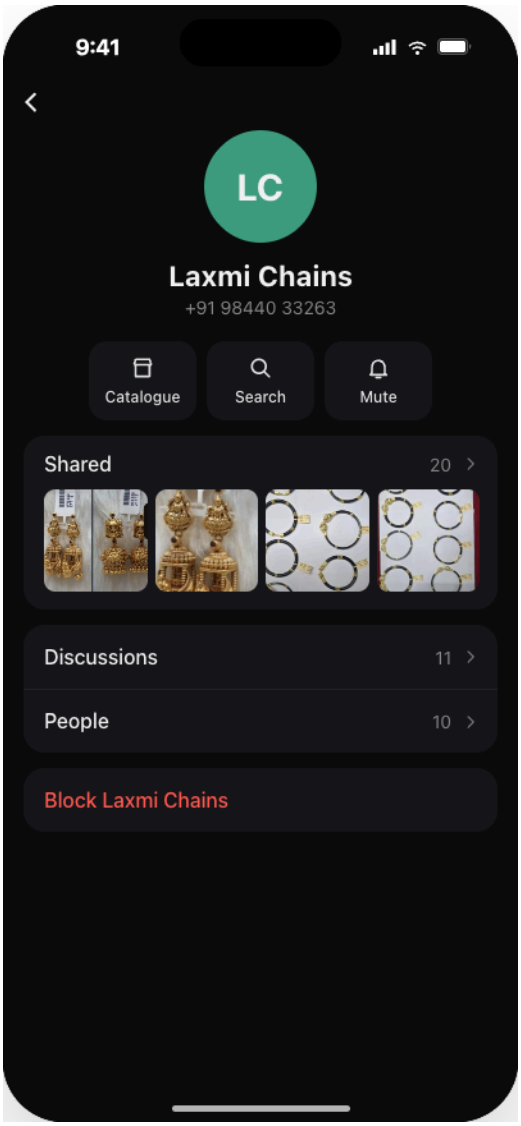

Tapping a name in any chat opens its profile. Every profile has the same four parts, so people learn it once. Each one fits on a single screen.

Part	What it holds
Who	Photo, name and phone number. Staff and customers also get a small tag saying who they are to you.
Actions	Two or three buttons, such as Catalogue, Message, Search, Add or Mute.
Rows	Shared (with four thumbnails), Discussions, People or Stores, and team notes.
Red row	One action that can't be undone: Block, Remove from store, or Leave group. Each asks you to confirm.

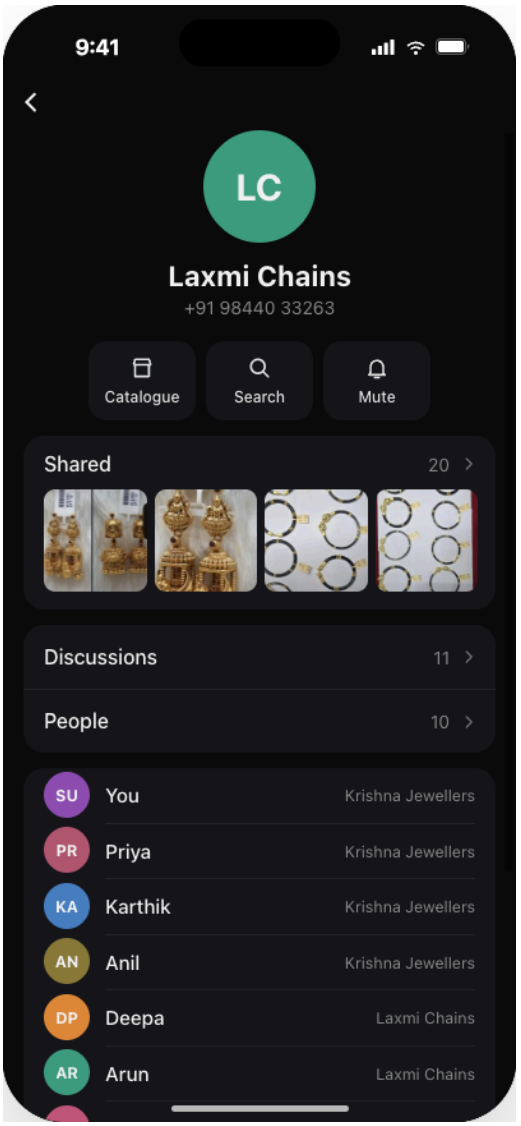

Profile	Tag	Actions	Rows	Red row
Store	None	Catalogue, Search, Mute	Shared, Discussions, People	Block
Personal contact	None	Search, Mute	Shared, Groups in common	Block
Staff (owner's view)	Staff · store	Message, Search	Discussions, Joined	Remove from store
Customer (store's view)	Customer · follows you	Message, Catalogue, Mute	Asked about, Team note, Discussions	Block
Group	None	Add, Search, Mute	Shared, Discussions, Stores	Leave group

6.2 Store

Opened by tapping the store name in its chat. **Catalogue** opens the store's products. **Search** searches every discussion. **Mute** switches to Unmute and adds the slashed bell to the chat header and Contacts. **Shared** opens 6.3. **Discussions** opens the full list. **People** expands in place to show everyone in the chat, grouped by store. Tapping a member of your own team opens their staff profile.

Store profile. Fits on one screen.

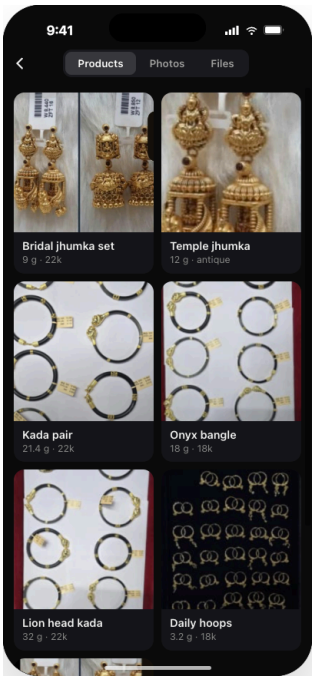

People expanded. All 10 people, with their stores.

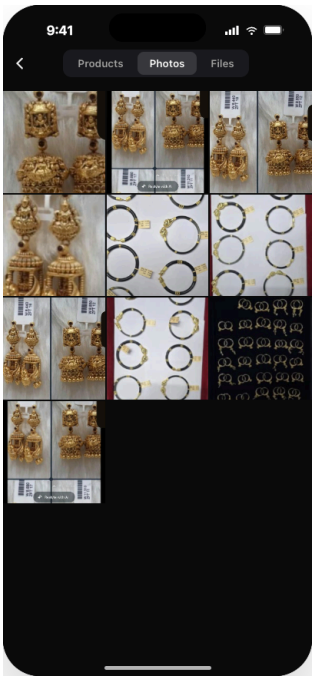

6.3 Shared in chat

Everything sent in this chat across all discussions, in three tabs. This replaces WhatsApp's Media, Links and Docs with what matters for a catalogue.

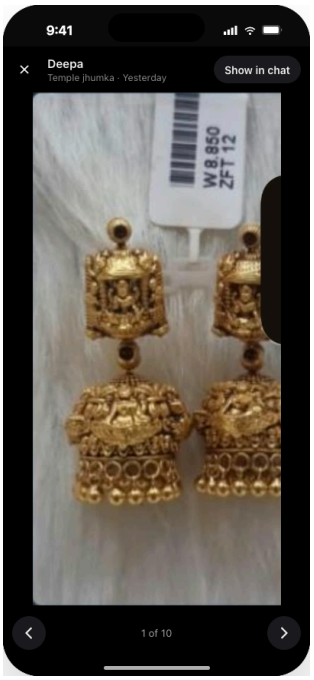

- **Products** (default): every catalogue item shared, as photo cards with name, weight and purity. Tap one to open its discussion.
- **Photos:** a grid of every photo sent. Tap one to open it full screen. The viewer shows who sent it and in which discussion, has previous and next buttons, and **Show in chat** jumps to the discussion.
- **Files:** invoices, rate cards and other documents, each with its sender, discussion and date. Tap to open its discussion.

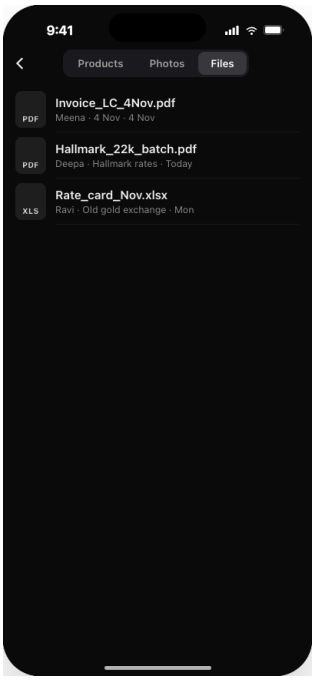

Products.

Photos.

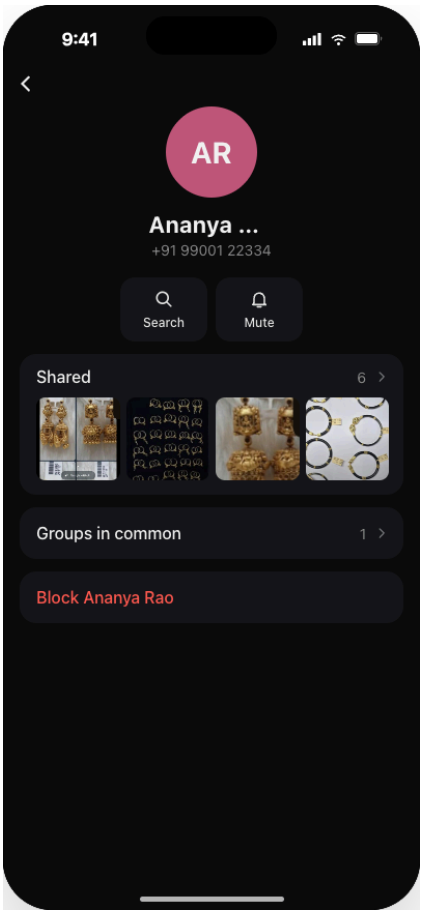

Viewer. Show in chat.

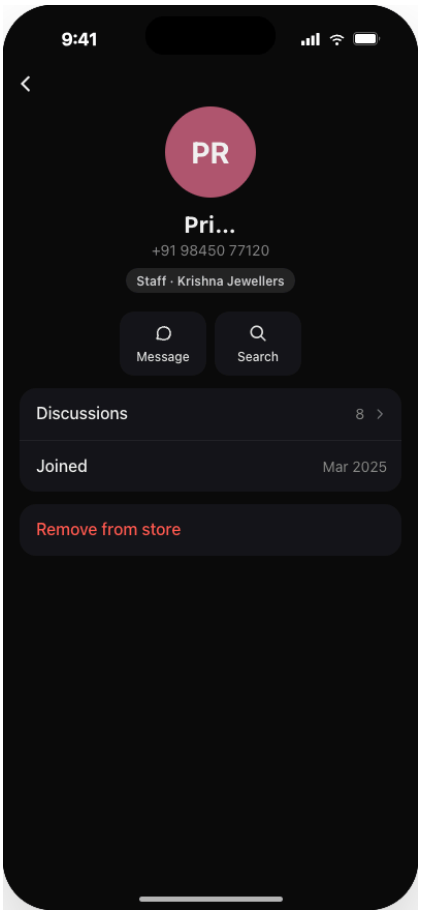

Files.

6.4 People: personal, staff and customer

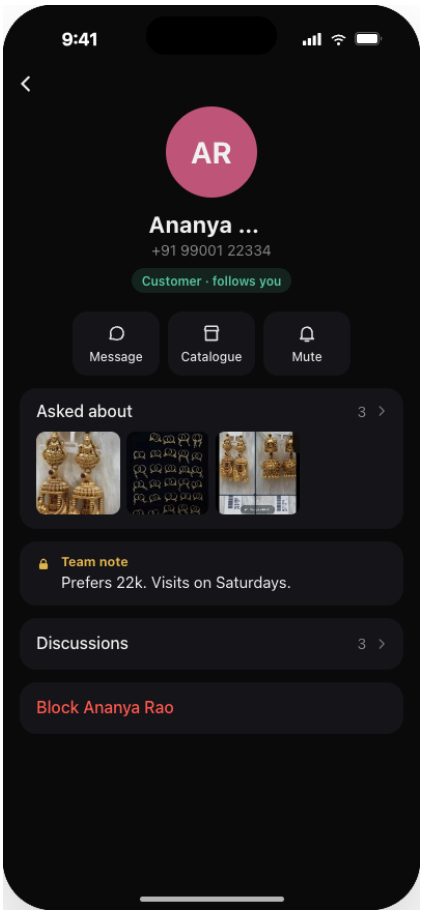

- **Personal contact:** a friend's personal account, seen from yours. It works like WhatsApp contact info: Search, Mute, Shared, Groups in common and Block.
- **Staff, owner's view:** a person on your team. The tag shows their role and store. Discussions lists the discussions they are in, and Joined shows when they joined the store. Only the owner sees **Remove from store**. Other staff see the same page without that row.
- **Customer, store's view:** a customer who chats with your store. The tag shows whether they follow you. **Catalogue** sends them your catalogue. **Asked about** shows the products they enquired about. **Team note** is a short note only your store sees, such as their preferred purity or visiting day.

Personal contact.

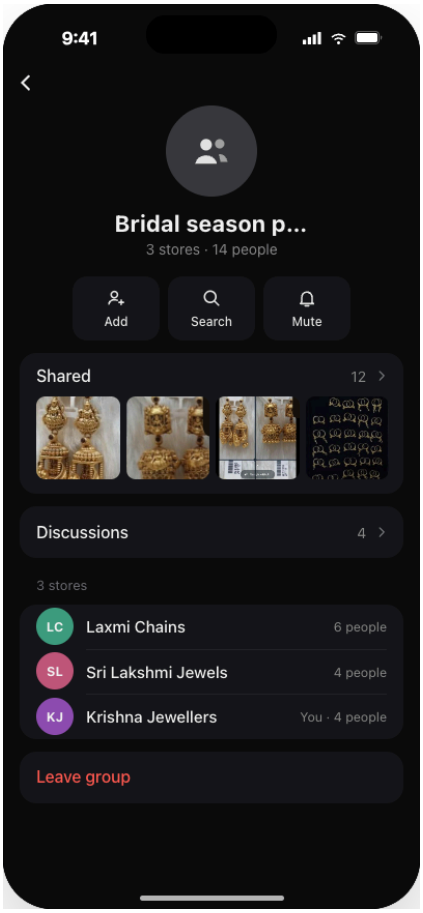

Staff (owner's view).

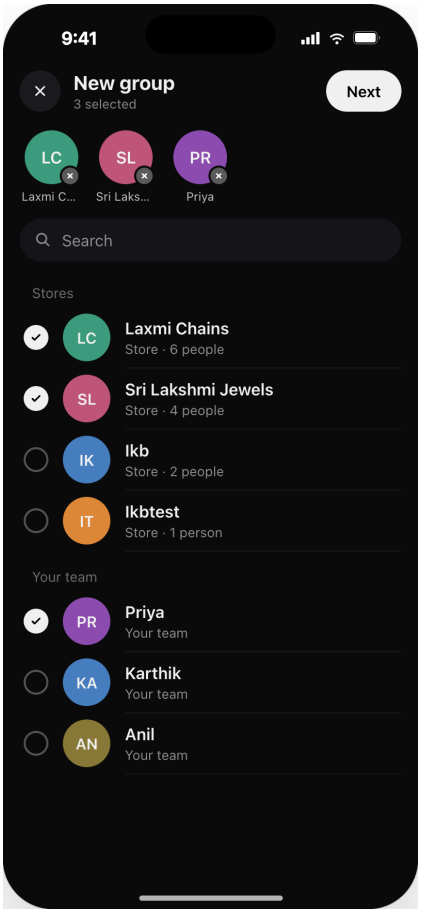

Customer (store's view).

6.5 Groups

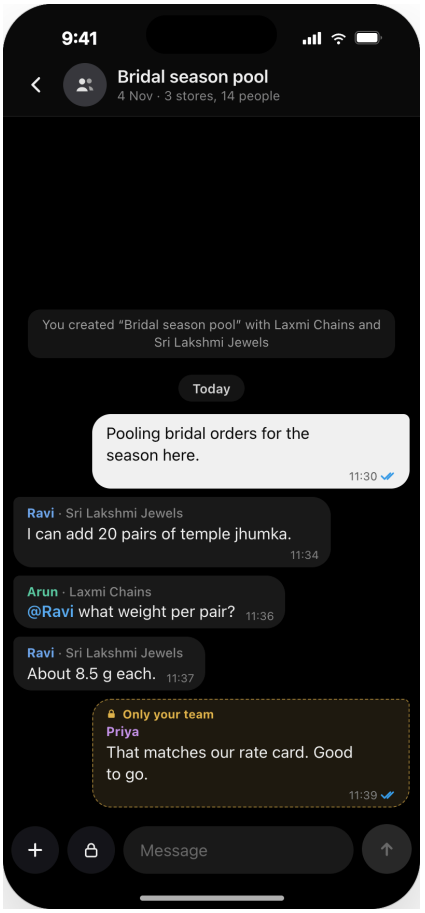

A group can hold several stores and people. Adding a store brings in its whole team. The group profile lists the stores in it, each with its head count; tapping a store opens its profile. **Add** adds more stores or people, and **Leave group** asks you to confirm. Inside, a group works like a store chat: discussions, @mentions and team-only notes.

Group profile.

New group. Pick stores and people.

Group discussion (v7 header; gets the discussion bar next).

7. Indicators

Indicator	Meaning
White chip in the bar	The discussion you are in
Count on a chip or row	Unread messages
Blue @ badge / blue name	You were mentioned / an @mention in a message
Slashed bell	The chat is muted
Two blue ticks	Read
“... is typing...”	Someone is writing in this discussion
Grey quote inside a bubble	A reply to that message
Amber lock, box or dashed bubble	Team-only, whether being written or already sent
Product photo / notes icon	A discussion with / without a product
Red row on a profile	Can't be undone, so it asks you to confirm

8. Rules and edge cases

- A store chat opens on the last discussion you had open there. The first time, it opens on the one with the newest message.
- A chat with only one discussion shows no bar.
- The bar shows open discussions only, in the order of the full list.
- New discussions need no input. They are named by date, with the time added for a second one on the same day.
- Opening a discussion marks it read for you.
- Team-only notes and the customer team note are visible only to the writer's store.
- Shared covers every discussion in the chat, including closed ones.
- Only the owner sees Remove on a staff profile. Owners can't remove themselves.
- Block, Remove from store and Leave group always ask you to confirm.
- Mute is per person and stays on until you turn it off.

9. Notes for engineering

Record	Fields and behaviour
Chat	type (store, person, group), members (stores and people), created at.
Discussion	chat, name, optional product, status (open or closed), closed by, sort position, last message at.
Message	discussion, author, author's store, kind (text, product, photo, file, status), visibility (everyone or team-only), reply-to message, starred by, sent at.
Per-user chat state	last discussion opened (used to choose where the chat opens), muted, last read message per discussion.
Shared index	Built from product, photo and file messages in the chat. Team-only items appear only for the writer's store.
Customer note	store, customer, text, last edited by. Readable and editable by that store's team only.
Typing	A short-lived signal for each discussion. While you are writing a team note, it goes only to your store.

10. Open questions

- How should a discussion be renamed? Options: long-press its chip, or tap the discussion's name.
- Is the list order set by dragging kept for each person or shared by the whole store?
- Should staff see Asked about and the team note on customer profiles, or only the owner?
- Should the discussion bar come to group chats in the same form? This document assumes yes.

11. Using the prototype

- **Every phone in sections 2 and 3 works.** Each one starts on a different screen and keeps its own place.
- **2a:** tap chips, ›, + and the store name. Back goes to Contacts, and tapping Laxmi Chains there returns you to the last discussion.
- **2c:** pick an action, type and press Enter. Laxmi Chains replies a couple of seconds later.
- **3a–3f:** each profile row opens what it names. Rows that would open screens not yet built show a short message.
- The *showNotes* tweak hides the explanation under each screen.

12. Screen index

ID	Screen	Section here
1a, 1b	Contacts, New chat	3
2a	Store chat, opened on the last discussion	4.1–4.3
2b	All discussions	4.4
2c	Long-press a message	5.2–5.3
3a	Store profile	6.2
3b	Shared in chat: Products, Photos, Files, viewer	6.3
3c, 3d, 3e	Personal contact, Staff, Customer	6.4
3f	Group profile	6.5
4a–4c	Team-only notes	5.3
5a, 5b	New group, Group discussion	6.5
